2022

Geographical Scope

Europe

Comparability

EPDs of construction products may not be comparable if they do not comply with EN 15804 and if they are not compared in the context of the building.

EPD author

Sarah Curpen, Silvia Vilčeková, EPD Clarity s.r.o.

Verification type

Independent verification of the declaration and data, according to ISO14025:2006

Description of organization

Established in 1889, Považská cementáreň produces around 10 types of products. Situated in the heart of the picturesque Považie region, Považská cementáreň has been a pivotal force in the construction and infrastructure development of Slovakia for decades. Committed to environmental stewardship and operational efficiency, Považská cementáreň integrates state-of-the-art technologies and best practices to minimize its ecological footprint while maximizing resource utilization. They currently harness the energy from alternative fuels such as RDF, meat-bone meal and used tires. Through strategic investments in research and development, the company remains at the forefront of sustainable cement production, setting benchmarks for responsible industrial practices.

Product information

Product name

CEM II/A-LL 42,5 R

Product description

Characterized by high strength class with high initial strengths, it is especially suitable for strength-demanding structures, concrete of qualitatively higher classes, prestressed concrete, reinforced concrete, concrete products, prefabs and wherever quick demolding to 24 hours. It allows concreting even in cold and frosty environments, below 5 °C, where it can be processed using special additives. Due to improved rheological properties, it is also suitable for more demanding concreting such as thin-walled prefabricated, plain concrete and cast concrete.

Product specification

Standardized strength (28 days): 42,5-62,5 MPa

EN 197-1:2011 Cement. Part 1: Composition, specifications and conformity criteria for common cements

EN 197-2: 2020 Cement. Part 2: Demonstration of conformity

Geographical scope

Slovakia

Product content information

Product components	Weight, kg	Post-consumer material, weight-%	Renewable material, weight-%
Clinker	755	0	0
Limestone	173	0	0
Gypsum	64.6	0	0
Others	7.6	0	0
TOTAL	1000	0	0

Manufacturing process

The basic raw materials are limestone and marl from the Butkov quarry, which, after grinding with the necessary additives, are ground into a fine meal and dispensed into the rotary kiln system in a controlled manner, and at a temperature of 1450 °C Portland clinker is formed, it is then ground with additives - gypsum, limestone, fly ash and others, and the resulting product is cement. The cement is delivered in silo tanks on rails or by truck.

Life cycle assessment (LCA)

Cut-off criteria

The study does not exclude any modules or processes which are stated mandatory in the reference standard and the applied PCR. The study does not exclude any hazardous materials or substances. The study includes all major raw material and energy consumption. All inputs and outputs of the unit processes, for which data is available for, are included in the calculation. There is no neglected unit process more than 1% of total mass or energy flows. The module specific total neglected input and output flows also do not exceed 5% of energy usage or mass.

Allocation, estimations and assumptions

Allocation is based on annual production rate and made with high accuracy and precision. The values for 1 tonne of the products which are used within this study are calculated by considering the total product weight per annual production. In the production plant, several kinds of products are produced; since the production processes of these products are similar, the annual production percentages are taken into consideration for allocation. According to the ratio of the annual production of the declared product to the total annual production at the factory, the annual total energy consumption, packaging materials and the generated waste per the declared product are allocated. Subsequently, the produced products output fixed to 1 tonne and the corresponding amount of product is used in the calculations.

Database(s) and LCA software

This EPD has been created using One Click LCA Pre-Verified EPD Generator. Ecoinvent v3.10.1 and One Click LCA databases were used as sources of environmental data. Characterization factors CML-IA version 4.1 have been used throughout the study.

LCA scenario and additional environmental information

Manufacturing energy scenario

Electricity data source and quality	Electricity, Slovakia, residual mix
Electricity CO _{2e} / kWh	0.25
Energy data source and quality (Coal)	Heat production, at hard coal industrial furnace 1-10MW, Europe
Heat production (coal) kg CO _{2e} / kWh	0.14
Energy data source and quality (Heavy Fuel)	Heat production, heavy fuel oil, at industrial furnace 1MW
Heat production (heavy fuel) kg CO _{2e} / MJ	0.093
Energy data source and quality (Biomass)	Heat production, untreated waste wood, at furnace 1000-5000 kW
Heat production (Biomass) kg CO _{2e} / MJ	[-]

End of Life (C1-C4, D)

The end-of-life modules (C1-C4, D) are omitted as the material fulfils the exemption criteria based on EN 15804+A2.

LCA results

Results are presented per 1 tonne (Declared Unit) of the product. Estimated impact results are only relative statements which do not indicate the end points of the impact categories, exceeding threshold values, safety margins or risks. Conversion mass factor: 1000.

Mandatory impact category indicators – EN 15804+A2

Indicator	Unit	A1	A2	A3	A1-A3

Revision Note – 13 November 2025

This study has been revised and updated on 13 November 2025 following the identification of an error in the energy data provided by the manufacturer in 2024. The original electricity consumption data were overestimated, resulting in higher reported environmental impacts. The corrected electricity consumption data are significantly lower, leading to an approximate 30% reduction in environmental impacts.
